SUMMARY

Project execution professional with 10+ years delivering complex engineering projects: data center construction at DPR, 100+ fuel cell deployments at Bloom Energy, and now gas-fired CCGT and reciprocating generation for hyperscale data center load at LS Power.

WORK EXPERIENCE

LS Power | San Diego, CA

Manager, Project Engineering | Apr 2024 – Present

- Lead conceptual design and engineering development of gas-fired and islanded power projects across ERCOT, PJM, and MISO, including CCGT and reciprocating generation serving hyperscale data center load.
- Evaluate and specify gas turbine and reciprocating-engine platforms (GE 7HA and LM6000; Siemens SGT-8000H, SGT-5000F, and SGT-800; MHI 501JAC; Wärtsilä and Caterpillar RICE), benchmarking performance, heat rate, footprint, lead time, and maintainability to support technology selection and FID.
- Own long-lead equipment strategy and procurement planning for gas turbines, transformers, and switchgear, weighing vendor lead times and delivery risk against project schedules.
- Serve as the primary technical and commercial interface with OEMs and EPCs on scope, proposals, and contract terms; support permitting across jurisdictions and interconnection/capacity discussions with grid operators at transmission voltages.

Bloom Energy | San Jose, CA

Project Manager | Apr 2021 – Apr 2024

- Directed installation, commissioning, and startup of 100+ fuel cell projects across US, with full accountability for schedule, budget, and contractual obligations.
- Managed 50+ internal and external project managers, field technicians, and contractors; established the field execution function and raised onsite efficiency across concurrent deployments.
- Drove cross-functional root-cause resolution between engineering, manufacturing, and quality, eliminating recurring factory kitting defects through QC gates and escalation to protect field schedules.
- Built standardized PM processes, documentation, and tracking that cut administrative overhead and improved schedule accuracy across the fleet.

DPR Construction | Redwood City, CA

Senior Project Engineer | Sep 2016 – Apr 2021

- Delivered a new data hall suite in one of San Francisco's largest data centers (chilled-water CRAH cooling, hot/cold-aisle containment, and electrical fit-out) through commissioning and turnover to operations.
- Coordinated complex overhead MEP for a ground-up pharmaceutical pilot manufacturing facility with FDA clean-room requirements.
- Ran construction program controls: CPM scheduling (P6), cost and change-order control, RFIs and submittals, quality, city permitting, and commissioning.

EDUCATION & CERTIFICATIONS

B.S., Civil & Environmental Engineering (Honors) | University of California, Berkeley | 2016

Project Management Professional (PMP) | Project Management Institute | #2899165 | 2020
